

Amendments to the Claims:

Listing of Claims - The following listing of claims is to replace all previous listing of claims.

1. (Currently Amended) A method of utilizing a push model to provide access to a message list in one or more of a voice, a fax, an e-mail and a unified mailbox through a wireless network, the method comprising the steps of:
 - a. determining if an updated mailbox content list is to be transmitted by a server to a wireless device, wherein the server independently determines if and when to transmit the updated mailbox content list;
 - b. forming a first communication link through a wireless network between the server and the wireless device;
 - c. transmitting the updated mailbox content list from the server to the wireless device over the first communication link;
 - [a] d. automatically receiving the an updated mailbox content list by the wireless device from the a server through the first communication link a wireless network;
 - e. disconnecting the first communication link;
 - [b] f. scrolling through the updated mailbox content list and selecting a message therefrom with the a wireless device;
 - [c] g. forming a second communication link through the wireless network thereby linking the wireless device and the server;
 - [d] h. selectively receiving the message on the wireless device from the server over the second communication link; and
 - [e] i. providing the message to a user of the wireless device.
2. (Original) The method of Claim 1 further comprising a new message notification, including the updated content list.
3. (Original) The method of Claim 1 wherein the wireless network has a low data-bandwidth and a high data-latency.

- 1 4. (Original) The method of Claim 1 further comprising the step of the user scrolling through
2 the updated mailbox content list without accessing the wireless network.
- 1 5. (Previously Presented) The method of Claim 1 further comprising the step of the user issuing a
2 command using the wireless device.
- 1 6. (Original) The method of Claim 1 further comprising the step of the server playing the
2 message according to a command given by the user.
- 1 7. (Currently Amended) A system for providing access to a message list in one or more of a
2 voice, a fax, an e-mail and a unified mailbox through a wireless network comprising:
3 a. a wireless device;
4 b. a server; and
5 c. a wireless network linking the wireless device with the server such that in operation the
6 server determines if and when an updated mailbox content list is sent by the server to
7 the wireless device, a first communication link is formed between the server and the
8 wireless device, the an updated mailbox content list is automatically sent over the
9 wireless network first communication link from the server to the wireless device, the
10 first communication link is disconnected, and after being sent by the server a message
11 from the updated mailbox content list received by the wireless device is selected using
12 the wireless device ~~thereby forming a~~ a second communication link between the
13 wireless device and the server is formed over the wireless network, and the selected
14 message is sent to the wireless device over the second communication link.
- 1 8. (Original) The system of Claim 7 wherein the wireless network has a low data bandwidth
2 and a high data latency.
- 1 9. (Previously Presented) The system of Claim 7 wherein the updated mailbox content list
2 includes a new message notification.

- 1 10. (Previously Presented)The system of Claim 9 wherein after being sent by the server, the new
2 message notification and the updated content list can be viewed by a user with the wireless
3 device.
- 1 11. (Previously Presented)The system of Claim 10 wherein the user may scroll through the
2 updated mailbox content list with the wireless device.
- 1 12. (Previously Presented)The system of Claim 7 wherein a user selects the message by issuing a
2 command to the server.
- 1 13. (Previously Presented)The system of Claim 12 wherein the server delivers the message
2 selected by the user and the message is played for the user by the wireless device.
- 1 14. (Currently Amended) A method of providing access to a message list in one or more of a
2 voice, a fax, an e-mail or a unified mailbox through a wireless network, the method comprising
3 the steps of:
4 a. determining if a new message notification and an updated mailbox content list are to be
5 transmitted by a server to a wireless device, wherein the server independently
6 determines if and when to transmit the new message notification and the updated
7 mailbox content list;
8 b. forming a first communication link through a wireless network between the server and
9 the wireless device;
10 c. transmitting the new message notification and the updated mailbox content list from the
11 server to the wireless device over the first communication link;
12 [a] d. automatically receiving through a the wireless network a the new message notification
13 and an the updated mailbox content list from a the server;
14 e. disconnecting the first communication link;
15 [b] f. remotely scrolling through the updated mailbox content list and selecting a message
16 therefrom using a the wireless device;
17 [c] g. forming a second communication link between the wireless device and the server; and
18 [d] h. receiving the message on the wireless device from the server over the second
19 communication link and presenting the message.

- 1 15. (Original) The method of Claim 14 wherein the wireless network has a low data-
2 bandwidth and a high data-latency.
- 1 16. (Original) The method of Claim 14 further comprising the step of a user scrolling through
2 the updated mailbox content list without accessing the data network.
- 1 17. (Previously Presented)The method of Claim 14 further comprising the step of a user issuing a
2 command using the wireless device.
- 1 18. (Original) The method of Claim 14 further comprising the step of the server playing the
2 message according to a command given by the user.
- 1 19. (Currently Amended) A system for providing access to a message list in one or more of a
2 voice, a fax or a unified mailbox through a wireless network, the system comprising:
3 a. means for determining if an updated mailbox content list is to be transmitted by a server
4 to a wireless device, wherein the server independently determines if and when to
5 transmit the updated mailbox content list;
6 b. means for forming a first communication link through a wireless network between the
7 server and the wireless device;
8 c. means for transmitting the updated mailbox content list from the server to the wireless
9 device over the first communication link;
10 [a] d. means for automatically receiving ~~the an~~ updated mailbox content list by the wireless
11 device from ~~the a~~ server through the first communication link ~~a wireless network~~;
12 e. means for disconnecting the first communication link;
13 [b] f. means for scrolling through the updated mailbox content list and selecting a message
14 therefrom with ~~the a~~ wireless device;
15 [c] g. means for forming a second communication link through the wireless network thereby
16 linking the wireless device and the server;
17 [d] h. means for selectively receiving the message on the wireless device from the server over
18 the second communication link; and
19 [e] i. means for providing the message to a user of the wireless device.

- 1 20. (Original) The system of Claim 19 wherein a new message notification includes the
2 updated mailbox content list.
- 1 21. (Original) The system of Claim 19 wherein the wireless network has a low bandwidth and
2 a high latency.
- 1 22. (Original) The system of Claim 19 wherein the user scrolls through the updated mailbox
2 content list without accessing the wireless network.
- 1 23. (Original) The system of Claim 19 wherein the user issues a command using the wireless
2 device.
- 1 24. (Previously Presented)The system of Claim 19 wherein the server plays the message
2 according to a command given by the user.
